BACKEND & AI ENGINEER / ENGINEERING LEAD

PROFILE

Engineering leader with 10+ years of experience building backend platforms, payment systems, enterprise products, and applied AI capabilities across India and Singapore. Strong in turning ambiguous product needs into scalable architecture, mentoring engineers, and shipping reliable systems with clear business impact.

EXPERIENCE

Indeed / Software Engineer II

Bengaluru, India

Sep 2022 - Present

Lead backend and AI-focused work where product judgment, system reliability, and team execution meet.

- Lead a team delivering high-impact projects across multiple domains, including an AI initiative applying advanced machine learning models to product capabilities.
- Mentor junior engineers through design reviews, ownership growth, and practical production decision-making.
- Drive platform performance and user-engagement improvements while aligning execution with strategic goals.

Stack / focus: Java, applied AI, distributed systems, technical leadership

Grab / Senior Backend Engineer

Singapore

Jun 2019 - Sep 2022

Built core payment infrastructure for one of Southeast Asia's largest superapps.

- Built the GrabPay debit-card platform from the ground up as one of the project's first engineers.
- Designed scalable, high-volume, low-latency architecture and services across Grab's payment ecosystem.
- Led a team of three engineers and owned system design, requirements, engineering quality, and code reviews.

Stack / focus: Go, payments, low latency, high throughput

Works Applications / Senior Software Engineer

Singapore

Jun 2018 - Sep 2019

Modernized enterprise systems during an on-premise to AWS migration.

- Designed serverless architecture using Lambda, DynamoDB, S3, and Elasticsearch.
- Created Spark batch-processing systems on AWS Batch for large-scale file workflows.

Stack / focus: AWS, Lambda, DynamoDB, S3, Elasticsearch, Spark, AWS Batch

EARLIER EXPERIENCE

Works Applications / Software Engineer

Singapore

Oct 2016 - Jun 2018

Built enterprise commerce and inventory capabilities for a Japanese ERP platform.

- Translated customer requirements into user-facing e-commerce workflows.
- Developed inventory-management capabilities as part of the commerce ERP platform.

Stack / focus: Enterprise systems, e-commerce, inventory management

Walmart Labs / Software Engineering Intern

Bengaluru, India

Jan 2016 - Jul 2016

Started in customer-facing commerce systems for ASDA's e-commerce platform.

- Built a reusable tooltip system as part of the customer-satisfaction engineering team.
- Shipped production-facing user experience improvements inside a large retail engineering environment.

Stack / focus: E-commerce, customer experience, frontend systems

TECHNICAL RANGE

Languages	Java, Go, SQL
------------------	---------------

Distributed systems	Kafka, Redis, Elasticsearch, Kubernetes
----------------------------	---

Cloud and delivery	AWS, Terraform, Lambda, AWS Batch
---------------------------	-----------------------------------

Data stores	MySQL, MongoDB, DynamoDB
--------------------	--------------------------

EDUCATION & CREDENTIALS

Computer Engineering

Thapar Institute of Engineering & Technology
Class of 2016

AWS Solutions Architect - Associate

Issued 2020

MongoDB with Java Spring Boot

Issued 2023

SELECTED PROJECTS

NIFTY50 Trader Pro - Market intelligence dashboard for technical signals and portfolio state. [Live demo](#) / [Source](#)

Digital Bio Maker - No-code portfolio builder for creating a clean, shareable professional presence. [Live demo](#) / [Source](#)
